email system while said primary email system was unavailable with the messages in said primary email system. This particular combination of elements claimed as Applicant's invention is neither taught nor suggested by the prior art.

Applicant's independent claim 18 is drawn to a method for intercepting and redirecting email messages to wireless devices, comprising, changing a domain name system designating of a primary email system responsive to detection of an outage of the primary email system; directing inbound email messages to an alternate facility; and delivering said email messages from said alternate facility to said wireless devices; and notifying an intended recipient of said email messages that said messages are available on said recipient's wireless device through said alternate facility at such time as said redirection of said email messages has been implemented.
